Geochemistry of the Mesoproterozoic Intrusions, Geochronology and Isotopic Constraints on the Xiaonanshan Cu

INQUA Subcommission on Shorelines of Northern and Western Europe. Electronic Supplementary Materials: Supplementary materials Table S1 and Table S2 are available in the online version of this article at.

Scott Polar Research Institute, Cambridge » Arctic Environmental Metadata Centre

Petrogenesis and tectonic significance of Sardasht syenite-monzonite-gabbro-appinite intrusions, NW Iran. Two of the xenoliths are strongly deformed and the ilmenite occurs as veins along the foliation.

Petrological and geochemical characteristics of Mesoproterozoic dyke swarms in the Gardar Province, South Greenland: Evidence for a major sub

The activity of Ne was calculated from the Ne analysis corresponding to the highest temperature see Fig. Did the Breakout of Laurentia Turn Gondwanaland Inside-Out?.

Principles of Precambrian Geology

The Huangshannan Ni—Cu sulfide deposit at the southern margin of the Central Asian Orogenic Belt CAOB is an important recent discovery in the Eastern Tianshan Region, Northwestern China. Large, high grade iron ore deposits are associated with Singhbhum and Dharwar BIF.
