

# A case study in hydrarch zonation

s.n - Response of redox zonation to recharge in a riverbank filtration system: a case study of the Second Songhua river, NE China

Description: -  
 -A case study in hydrarch zonation  
 -A case study in hydrarch zonation  
 Notes: 13

**Landslide hazard zonation map of Kurram Valley: A case study of landslide at Gharbina village Parachinar Kurram Valley.**

Sunandana and Lakshmikanta used image processing technique and Digital Elevation Model to identify landslide hazard prone area in GIS.

**Evaluation of landslide hazard and its impacts on hilly environment of the Nilgiris District**

Viswanathan, Chancellor at VIT University, Vellore, India, who provides all the facilities and his encouragement about this work. The variations in Mn 2+ and Fe 2+ contents in groundwater might reflect the influence of regional groundwater lateral recharge in cases when: 1 the regional groundwater has high concentrations of Mn 2+ and Fe 2+; 2 the Mn 2+ and Fe 2+ contents in groundwater at well FS1-1, which is 80 m away from shore, are lowest because of the sequential redox processes; and 3 mixing of groundwater with two different reducibilities suggests a new environment wherein the concentrations of Mn 2+ and Fe 2+ in the far-shore groundwater are influenced by groundwater mixing and reaction.

**GIS Based Landslide Susceptibility Zonation**

Vegetation of prairie potholes, North Dakota, in relation to quality of water and other environmental factors.

**Spatial distribution and abundance of Unionidae mussels in a eutrophic floodplain lake**

Land Subsidence Measurement In order to determine the subsidence of various points of the City, an extensive surveying network using 500 stations in an area of 334 square kilometers was used.
