This data might seem to suggest extreme Southern inequality in wealth distribution but in reality the information shows surprising little divergence of inequality levels between North and South.

Jelly Fungi (vivchar.tom.ru)

The poorest states in this respect were Michigan, Minnesota, and Kansas, on the frontier of settlement.

The Tremellales of the north central United States and adjacent Canada (Book, 1944) [vivchar.tom.ru]

Bulletin of the American Museum of Natural History 184: 1-368. Carines during the Civil War in his book The Slave Power.

2011

Twenty-three species are reported from Florida. These statistics reveal a surprising similarity of wealth distribution among the free men of North and South. Late Eocene silicified fruits and seeds from the John Day Formation near Post, Oregon MIHLBACHLER, M.

Central Pacific Railroad

One species of Myrmecosaurus is associated with Solenopsis ants Tschinkel 1992, Wojcik 1980.
