## Embryonic core complexes in narrow continental rifts: The importance of low

Geological Survey Bulletin 1886, p. Geological Survey Digital Data Series 30, one CD-ROM. Nevertheless, despite these differences, it appears that in both domains LANFs are developed through a rolling-hinge mechanism, and if extension progressed in the Rio Grande rift, it would eventually result in the formation of a metamorphic core complex similar to those observed in the Basin and Range Province.
