## Liquid

There are two examples each for liquid-liquid and liquid-in-liquid emulsion, either using one monomer or two.

## Gas

Ionic liquid-mediated selective conversion of  $\text{CO}_2$  to CO at low overpotentials. We can write this as an equation of the form:  $\text{A} \rightarrow \text{A}^{\text{ads}}$ .

## Enhanced Photocatalytic Reaction at Air

Peter John should beg public. Since the reaction consumes the RBr reactant, the inward flux to the solution is negative.

## Highly efficient electrosynthesis of hydrogen peroxide on a superhydrophobic three

Since 1959, interfacial polymerization has been extensively researched and used to prepare not only polyamides but also , , , , polysulfonamides, polyphenyl esters and.
