The members of the committee responsible for the report were chosen for their special competences and with regard for appropriate balance. The eBook is optimized for e-reader devices and apps, which means that it offers a much better digital reading experience than a PDF, including resizable text and interactive features when available.

New Worlds, New Horizons in Astronomy and Astrophysics: National Research Council: 9780309186858: Telegraph bookshop

Fully surveying the New Horizons flight path for KBOs took several years, but in 2014 they found one — Arrokoth previously nicknamed Ultima Thule. The researchers are watching to see if particles smoothly tail off towards the edge of the disc, or if they suddenly drop off.

What New Horizons is still revealing about Pluto and beyond

The nine appointed panels comprised 123 members drawn from across all of astronomy and astrophysics. There were also instructions to consider and make recommendations relating to the allocation of future budgets and to address choices that may be faced, given a range of budget scenarios—including establishing criteria on which the recommendations depend, and suggesting strategies for the agencies on how to rebalance programs within budgetary scenarios upon failure of one or more of the criteria. In particular, this class of observations can help scientists study the atmospheres on these worlds, investigating whether they are swaddled in.

Institute of Technology. One currently unresolved mystery is that the larger worlds of the Kuiper Belt — like Pluto, MakeMake, Eris and Haumea — seem to scatter light differently to the smaller bodies, such as Arrokoth.

A Universe Half Empty, or Half Full? An SLS with the enlarged four-engine upper stage could debut a few years later, but the SLS Block 2 with evolved boosters is not expected to fly until the end of the 2020s, at the earliest. To conserve energy and lessen the chance of anything breaking, controllers kept the Pluto-traveling spacecraft in hibernation, aside from periodic wake-ups for navigation and systems checks. Spacecraft typically have a set design lifetime, similar to warranties on electronics or cars.
