Chapter 23

Grew well in initial stages in Grande Cache 269. A decreasing variety of birds move about the preserve and, aside from the rant of killdeer, they are mostly quiet.

Marine Triassic faunas of North America: Their significance for assessing plate and terrane movements

The Board wishes in particular to thank Dr. .

Composition, radioisotopic ages, and potential significance of an altered volcanic ash (bentonite) from the Upper Cretaceous Judith River Formation, Dinosaur Provincial Park, southern Alberta, Canada

. Pennsylvanian deposystems and paleoclimates of the Appalachian.

Chapter 23

The preliminary network was prepared in two iterations. .

Timing of terminal Pleistocene deglaciation at high elevations in southern and central British Columbia constrained by ¹⁰Be exposure dating

Elevations range from 1,000 to 1,600 m . This is a rarely attempted goal, and the author presents us with a unique solution.

Full text of Canadian

However, the importance of bio- stratigraphic subdivision has also been stressed by Oinomikado 1956. The Manila Observatory will continue its regular program of seismic recordings from its five Sprengnether seismometers. Evaluation plots of accuracy for binary logistic models for channel presence by basin type.

Stone sheep and their habitat in the northern Rocky Mountain foothills of British Columbia

As a result of these temporal shifts in process domains, deterministic models which rely entirely upon remotely sensed data are at a disadvantage compared to more empirical models that utilize field measures.

Full text of of the Lepidopterists'

The hydrophobicity of coal macerals.
