Research for Development

There was no significant difference in DBH of the shade trees between systems for all the regions. The average yield under well-watered condition was 2668.

New Agriculturist 98

However, the crop still suffers from yield losses from intermittent and terminal drought in its main growing environments. Chapters 3 and 4 provided examples from India and Bangladesh of process approaches to information and monitoring in developments projects.

Why Small

This phenomenon is happening differently across continents due to their level of vulnerability. Handle with care: maintaining the quality and value of your sweetpotato roots during and after harvest through better practice. In appearance, it is similar to dry roasted peanut, but is drier less oil and more strongly flavoured Sri Redjeki, pers.

Nadowli

Whereas shows the frequency of each category of adaptation strategy plotted in bar charts.

Agriculture Sector

Journal of International Development, 25, 325-339. W is an index that measures the ratio of the observed variance of the sum of ranks to the

maximum possible variance of sum of ranks.
