After a Tornado

Tornado outbreaks have also coincided with rising ocean temperatures. Hail is created when small water droplets are caught in the updraft of a thunderstorm.

Tornado Facts!

STORM CHASER: It's crossing the interstate right where we were. These differ from tornadoes in that they are not associated with a thunderstorm or any cloud and are usually very weak.

Tornado Tracking

Tornadoes can appear as a traditional funnel shape, or in a slender rope-like form.

Severe Weather 101: Tornado Basics

STACEY BARTOW: I remember the things falling on me, and I was afraid something big was going to crush me to death.

How Tornadoes Work

Winds can also destroy bridges, flip trains, send cars and trucks flying, tear the bark off trees, and suck all the water from a riverbed.
