PVC is commonly used as an underground raceway because of its low cost, ease of installation, and resistance to corrosion and decay.

## Wiring Methods & Material

Such building elements allow the use of cable trays for power and ICT cabling and J-hooks ICT cabling. An example is the 600-mm 24-in.

**Electrical Raceways & Other Wiring Methods: Based On The 2005 National Electric Code: Loyd, Richard E.: 9781401851835: vivchar.tom.ru: Books**

To see an example of this, look at Table 4 of Chapter 9.

## 1926.405

Only wiring methods consisting of Type MI cable without an overall nonmetallic covering, Type MC cable employing a smooth or corrugated impervious metal sheath without an overall nonmetallic covering, electrical metallic tubing, flexible metallic tubing, intermediate metal conduit, or rigid metal conduit without an overall nonmetallic covering shall be installed in ducts specifically fabricated to transport environmental air.

## 1926.405

The metal raceway shall be supplemented by an internal insulated equipment grounding conductor installed to ground the equipment enclosure. Typically, these pathways are used in conjunction with conduit route within a wall to provide a connection to a junction box. This would combine several types of pathways to provide the client or occupant a flexible system that is code compliant.

## Consulting

Where corrosion protection is necessary and the conduit is threaded in the field, the threads shall be coated with an approved electrically

conductive, corrosion-resistant compound.
