Procedures for collecting and analyzing mortality data in LSMS

Procedures for collecting and analyzing mortality data in LSMS

Language: English Summary: Procedures for measuring and analyzing infant and child mortality in developing countries are reviewed, with an emphasis on the use of these procedures in living standards measurement studies.

Procedures for collecting and analyzing mortality data in LSMS

The second part of the paper is concerned with the analysis of infant and child mortality data and includes sections on mortality differentials and multivariate analysis.

Procedures for collecting and analyzing mortality data in LSMS

Series: Country of Publication: United States Publisher: Washington, D. An appendix is also included on statistical precision and household sample size in surveys that measure mortality. In the first part of the paper, three techniques of infant and childhood mortality estimation using sample survey data are described: direct estimation with reference period data, indirect estimation with childhood survivorship data, and indirect estimation with reference period data.
