Background The aging of the American population has broad range of implications for the range of the fields and the facets of the American society. The literature review below defines the core crusts of American aging population.

Proceedings of the Tenth Workshop on Statistical Machine Translation

It has also been estimated that by the end of the year 2030, the last baby boomer will turn to an age of 65 and by the end of the year 2030, it is predicted that among the 72 million people in United States, one of every five would be an older adult Services, 2010. Hong Kong is the country

where the average life span of the men and women after the age of 65 years is longest of about 17 years and 20.

Vol 7, Issue 4, September 2019

IJMSS accepts research papers in these areas: Basic Mathematics. Majority of the Americans today are living their lives at the age of 70 and 80 years.

Statistical Research Assignment Case Solution And Analysis, HBR Case Study Solution & Analysis of Harvard Case Studies

There are basically two realities, which are driving the population of the adults in America. Since the January 1, 2011, most of the Americans are going to celebrate their 65 th birthday over the period of the next 20 years. Not so long ago, those people that retired from their work usually lived a very few years after their retirement and then they died.
