They can be administered selectively to malignant tumours and so minimize damage to healthy tissue.

Fishery science : its methods and applications (Book, 1953) [vivchar.tom.ru]

Applications Of Transgenic Animals The transgenic animals are created because of the benefits they provide to the man. One type of hypothesis is the null hypothesis or the no-difference hypothesis. This journal provides an international forum for the publication of papers in the areas of fisheries science, fishing technology, fisheries management and relevant socio-economics.

Fisheries Research

Freshwater is a precious resource on the Earth's surface. Using the sea as an example, before the 2011 earthquake there were about 1000 oyster cages in the southern part of Shizugawa Bay, causing overcrowded conditions that resulted in it taking two to three years for oysters to grow to a marketable size. In mixed stocks, the fishing mortality is not matched to each local population's viability.

Transgenic Animals

Key areas are also reflected by the various sections of the journal.

Science Excellence

However, CGH requires the use of the relevant tumour DNA for its application and uses metaphase chromosome spreads as targets for hybridization which can only detect relatively large gains or losses in genomic material.
