applications of ultrafast lasers 5 : 24

Djafari Rouhani, Proc, IEEE 9th Conference on Semiconducting and Insulating Materials, April 29 - May 3, 1996, Toulouse, France, p. Although still limited to the clinical research field, the development of multiphoton laser microscopy is thought to become suitable for a practical application in the next few years: in this paper, we performed an accurate review of the studies published so far, considering the possible fields of application of this imaging method and providing high quality images acquired in the Department of Dermatology of the University of Modena.

Femtosecond laser ablation and deposition of metal films on transparent substrates with applications in photomask repair (invited Paper)

The temperature rise in PMMA resist is mainly from heat conducted from the silicon substrate backward to the resist and from the mask plate through inner cavity air forward to the resist, while the X-ray absorption is only secondary. Optical reprogramming of human cells in an ultrashort femtosecond laser microfluidic transfection platform.
