NORMAL REFERENCE VALUES The reference values which are defined as the amount of a substance present in the serum, urine or other body fluid of a healthy individual, vary over a range. Journal of Laboratory and Clinical Medicine.

## General Biochemical Tests

Use the same cleaning methods and the plastic bags for collecting the urine. Doing so could kill bacteria in the sputum, rendering it useless. Lab Procedure We have included the basic procedure for doing each biochemical test in the table below.

## The Oral Microbiome Bank of China

It may also show what treatments may work to kill an invasive organism.

臨床検査 = Journal of clinical laboratory medicine. 14(1)

Fingerstick Procedure The best locations for fingersticks are the 3rd middle and 4th ring fingers of the non-dominant hand. Pigments and other compounds in certain foods and medications may change the color of urine.

### **Técnica de bilirrubina**

The sample is then taken to the laboratory for culture.
