The effort is worth it, however, since there is a chance at revolutionizing launches. However the Discovery in the movie did not use this idea, as thought it might be considered parody after making. Coat all of the capacitor leads and solder connections with RTV silicon rubber or Plasti Dip for safety.

Solder the other end of the primary winding wire to post number 3. Cryogenically cooling the inductor drastically reduces its internal resistance but still only increases the time constant from milliseconds to seconds, whereas capacitors can store energy for 1,000 sec or more. Over the next hundred years, various patents were granted for linear motors to power devices such as railways and textile shuttles Gieras, 1994, p.
