Successful counseling has process factors which are common across the various counseling models. Though often overlooked by clients, small problems such as headaches, sleep disturbances or being late to work may be a result of substance use. Low DAST-10 scores indicate the need for a brief intervention, whereas moderate and high scores indicate the need for referral to treatment.

Familiarity with and ability to utilize standardized assessment instruments specific to substance abuse will help the counselor in this assessment process. Spine creases, wear to binding and pages from reading. Some successful treatment outcomes have been linked to short-term interventions, aversion therapy, stress management, solution-focused brief therapy, and social skills training, yet seldom are these methods utilized in traditional substance abuse treatment programs in the United States.

Counseling the Alcohol and Drug Dependent Client: A Practical Approach 1st Edition

Special Features: Chapters 1-3 introduce and explore the consequences, costs and ideas for understanding substance abuse and addictive behavior, and include a detailed examination of the scope, risk factors, and etiology of substance abuse. Tier 2: Brief intervention Brief intervention is the second tier of SBIRT. The intent of these tools is not to reach a diagnosis but rather to start a conversation.

Craig, Counseling the Alcohol and Drug Dependent Client: A Practical Approach

The counselor emphasis is on the person not the substance abuse problem.
