Preparation of Catalysts I: Scientific Bases for the Preparation of Heterogeneous Catalysts Proceedings of the First International Symposium held at the Solvay Research Centre, Brussels, October 14

Semi-tied full-covariance matrices for hidden Markov models. Both share similar On Demand behavior, but the protocol's internal mechanism leads to significant performance difference.

PHASE II: The Phase II effort will address the third and fourth challenges by concentrating on the design and development of analytic capabilities to create a composite picture from multiple data sources and providing informative, scalable visualization capabilities for both data and analytics.

The method has been employed to normalize food grain images and hence eliminating the effects of orientation using image warping technique with proper scaling. The 2,3-dihalopropanol is particularly useful in a process for making epihalohydrin.
