The 17th International Conference on High Pressure in Semiconductor Physics (HPSP)

However, if there are enough ϵ_j s set to zero in the segmenting sequence, the dependencies of the output prefixes are so localized that sub-logarithmic algorithms could exist, and an I? Redundancy resolution is achieved when mapping the Cartesian control input F computed in 4 - 6 to joint actuator torque T . Introduction
Numerous questions have arisen in the course of design and construction of telemanipulator master-controllers and end-effectors; particularly, concerning the nature and magnitude of manipulative stimuli which should be presented to the controlling hand.
