Popularisations are consumed by lay readers among whom are literary intellectuals, social commentators, political journalists, philosophers, historians and priests: scientists did not anticipate that among the non-scientific populace there were such skilled critics with their own agenda for the complexion of British popular and intellectual culture. The pervasive and reinforcing assumption that the public only hesitates because it is ignorant shields science and government institutions from examining their own practices with respect to earning and maintaining the public trust. Sociologists, anthropologists and social psychologists study the public; psychologists and educationalists study understanding; and historians, philosophers and sociologists study the nature of science.
