

# Cancer survivorship - research challenges and opportunities for the new millennium, March 8-9, 1999.

**National Cancer Institute - Recurrent sick leave and resignation rates among female cancer survivors after return to work: the Japan sickness absence and return to work (J**

THESE STRUCTURES  
OF CONCRETE,  
BARBED WIRE, BARS  
& WALLS FOSTER  
THESE SYSTEMS OF  
VIOLENT TRIALS.  
THEY INCUBATE THIS  
ABUSED, NERVOUS,  
PAINED CONDITION.  
SO WHAT ARE THEY  
BUT SOME SYSTEMIC  
MODELS  
OF SILENCE

## Cancer Survivorship in the USA: Challenges and Opportunities

As a result, participants often required additional help with registration tasks such as selecting a username and password. Screening and prevention need to become more integrated into direct clinical care, as the screening appointment is a teachable moment for providing cancer prevention advice. We sought to leverage newly available late mortality data on childhood cancer survivors who received a diagnosis between 1970 and 1999 to update previous estimates of projected life expectancy and examine whether survivors of childhood and adolescent cancer diagnosed in recent treatment eras can expect to live longer as a result of changes in pediatric cancer treatment.

## Online focus groups as a tool to collect data in hard

Acquisition, analysis, or interpretation of data: Yeh, Ward, Chaudhry, Liu, Yasui, Armstrong, Gibson, Howell, Hudson, Krull, Oeffinger, Diller. Research is needed to explore the benefits and harms of various labels for DCIS through input from women and clinicians to optimize language for DCIS. In an empirical study of posttreatment adjustment, 94 women with stage 0, I, II, or III breast cancer who were completing radiation therapy were assessed on measures of depression, anxiety, and quality of life on the last day of treatment and at 2 weeks, 4 to 6 weeks, 3 months, and 6 months posttreatment.

## Recurrent sick leave and resignation rates among female cancer survivors after return to work: the Japan sickness absence and return to work (J

Most of what we know about medical or psychosocial issues during survivorship is based on studies on survivors of childhood or breast cancer among adults.

## Cancer survivorship research: the challenge of recruiting adult long term cancer survivors from a cooperative clinical trials group

These effects of cancer and its treatment are multifaceted and interrelated. Health insurance coverage and cost barriers to needed medical care among U.

### **Adjustment to Cancer: Anxiety and Distress (PDQ®)**

Or perhaps, we need to understand whether broad system structures like fee-for-service, capitation, or single-payer systems influence improvements at the level of interfaces in the cancer care processes. He divides his time between London and Edinburgh where he is also the Deputy Chairman of Merchiston Castle School as well as the sister School in Shenzhen China. Hormone-secreting tumors Pheochromocytoma, thyroid adenoma or carcinoma, parathyroid adenoma, corticotropin-producing tumors, and insulinoma.

### **Conferences**

Younger survivors aged 18—54 years , women, nonwhites, unmarried survivors, and those with lower incomes reported more problems.
