Sustainable Development and Population Dynamics: Placing People at the Centre

Today, the threat of infectious disease, while not gone, is certainly less severe. Finally, urbanization, particularly in less-developed regions, frequently outpaces the development of infrastructure and environmental regulations, often resulting in high levels of pollution.

Population Geography Overview

The RAND Corporation is a nonprofit institution that helps improve policy and decisionmaking through research and analysis. Land Use Fulfilling the resource requirements of a growing population ultimately requires some form of land-use change--to provide for the expansion of food production through forest clearing, to intensify production on already cultivated land, or to develop the infrastructure necessary to support increasing human numbers.

Population and Environment: A Complex Relationship

Thus, it appears that the influence of infectious disease on human population growth is becoming less significant. It is clear that even in the wealthier nations many individuals and families experience misery and unhappiness because of the birth of unwanted children. However, as global population continues to grow, limits on such global resources as arable land, potable water, forests, and fisheries have come into sharper focus.

Sustainable Development and Population Dynamics: Placing People at the Centre

Does the simultaneous occurrence of population growth and environmental decline over the past century indicate that more people translate into greater environmental degradation? When motivation is high and sustained, difficult procedures for controlling fertility can be used successfully, but when motivation is weak and erratic, simple procedures that impose few demands are essential. Also, you can type in a page number and press Enter to go directly to that page in the book.

Population Geography Overview

Stable population diagrams are rounded on the top, showing that the number of individuals per age group decreases gradually, and then increases for the older part of the population. Humans, however, have the ability to alter their environment to increase its carrying capacity sometimes to the detriment of other species e.

Sustainable Development and Population Dynamics: Placing People at the Centre

While some view large, rapidly growing populations in developing regions as the primary culprit in environmental decline, others focus on the costly environmental effects of overconsumption among the slowly increasing populations of the developed nations. However, the population will still be increasing and the threat of overpopulation remains.

Population and Environment: A Complex Relationship

Together, these measures help to avoid unwanted pregnancies, reduce teenage pregnancies, curb infant and maternal mortality, and reduce gender-based violence and unsafe abortions.
