Grassland Grouse and Their Conservation, Johnsgard, Paul A.

This book was launched as project following the 11th International Grouse Symposium which was held September 11-15, 2008 in Whitehorse, Yukon, and the first grouse symposium to be held in Canada.

He loved both the native grassland and the Sharp-Tailed Grouse.

Sharp

Sharp-tailed grouse are native to Montana and classified as an upland game bird, but there has not been a hunting season in the western part of the state since 1948. Sandercock, Manhattan, Kansas Kathy Martin, Vancouver, British Columbia Gernot Segelbacher, Freiburg, Germany August 30, 2010 About the Book Grouse—an ecologically important group of birds that include capercaillie, prairie chickens, and ptarmigan—are distributed throughout the forests, grasslands, and tundra of Europe, Asia, and North America. My sincere thank you to all landowners that allow people to hunt their CRP.

Conservation Reserve Program (CRP) Benefits Prairie Grouse and More

Indeed, poor range management on private lands has been implicated in the reduction of sharp-tailed grouse in both the United States and Canada Kessler and Bosch 1982, Johnsgard 1983, Kirby and Grosz 1995.

Grassland Grouse and Their Conservation, Johnsgard, Paul A.

Sharp-tailed grouse *Tympanuchus phasianellus* are an excellent model species to evaluate the effects of grazing and rangeland management on prairie obligates because they depend on diverse high-quality grassland habitats distributed across broad landscapes. Thus we also aim to develop a mechanistic understanding of the ecological effects of various grazing treatments with a focus on rest-rotation grazing by examining densities and

demographic performance of the grassland bird and mesopredator communities.

Buteo Books: Grassland Grouse and Their Conservation

Grass type, meaning cool- or warm-season species, varies greatly depending on the longitude. I recommend this Volume to everyone interested in grouse or emerging techniques for examining processes that affect population biology.

The Minnesota Sharp-tailed Grouse Society and Minnesota Prairie Chicken Society encourage farmers and ranchers to learn more about CRP and enrollment by visiting their local Farm Service Agency office. Today, many grouse populations are in decline, and the conservation and management of these charismatic birds is becoming a global concern.
