UNSPECIFIED 1991 MASS SPECTROMETRY REVIEWS, 10 3. At low concentration of 10 percent ACN by mole ratio, absorption intensity is redistributed from post edge to main edge and pre edge, accompanied by a shift of the latter as shown in Figure 4. There were 66 full papers, including 24 feature articles in the Special Issue, giving an average of 10 pages per article.

Here the student could learn about micro-bunching in the SASE process leading to a fully coherent and ultra-short x-ray source that will be realized in 2009 with the Linac Coherent Light Source LCLS at SLAC. A small number of articles that did not meet this criterion, but which otherwise met the required standards of quality, were transferred to the partner journal, Section F. The number of pages printed for Section B decreased from 940 in 2007 to 791 in 2008.
