Menstrual characteristics and prevalence of dysmenorrhea in college going girls

Of the neurotransmitters studied, serotonin is the principal one implicated in the pathogenesis of PMS and PMDD. Study parameters Information regarding current age, education, anthropometric data height, weight was recorded. The etiology of PMS is not yet fully understood, but endocrine studies have clarified that the premenstrual symptoms are not a result of a simple excess or deficiency of any given hormone.

Bipolar Disorder & PMDD

In fact, approximately 65 instruments have been designed to measure premenstrual symptoms Budeiri et al. For example, an important randomized controlled trial of the 5 α -reductase inhibitor dutasteride, which blocks the conversion of progesterone to allopregnanolone, found a significant reduction in core symptoms among women with PMDD, including irritability, sadness, anxiety, food cravings, and bloating, with 75% of women enrolled in the study no longer meeting the criteria for PMDD after 1 month of active treatment.

Menstrual characteristics and prevalence of dysmenorrhea in college going girls

Women with high stress preceding both cycles were 25 times more likely to report moderate to severe symptoms than were women with low stress preceding both cycles.

A prospective study of premenstrual tension symptoms in healthy young Australians

Women ranked their responses according to a scale, ranging from never to fairly often.
