Jamshidi™ Bone Marrow Biopsy Needles

This part of the procedure is known to produce pressure.

Bone Marrow Biopsy (Ambulatory Care)

The International Myeloma Foundation medical and editorial content team Comprised of leading medical researchers, hematologist, oncologists, oncology-certified nurses, medical editors, and medical journalists, our team has extensive knowledge of the multiple myeloma treatment and care landscape.

Bone marrow biopsy

The actual procedure of the bone marrow biopsy consists of two parts: the marrow aspiration which obtains the sample of the liquid portion of the marrow and the bone marrow biopsy which is concerned with obtaining the solid portion. The doctor inserts the needle and at this time the patient may experience sharp pain.

What To Expect From A Bone Marrow Biopsy

Bone marrow is the soft tissue inside your bone that helps to make blood cells.

Bone Marrow Biopsy: Purpose, Procedure, and Risks

Your doctor may also order a bone marrow test to see how far a disease has progressed, to determine the stage of a cancer, or to monitor the effects of a treatment. If you meet three of the minor criteria for SM, you do not need a positive bone marrow biopsy for diagnosis; however, a positive bone marrow biopsy is the most common method of diagnosis. You receive a local anesthetic, typically lidocaine.

Bone Marrow Biopsy (Ambulatory Care)

You may have a bruise on the site.

Bone Marrow Biopsy

These tests are often done to find the reason for many blood disorders and may be used to find out if cancer or infection has spread to the bone marrow. Bone marrow biopsy and aspiration Normal: The marrow has normal amounts of fat, connective tissue, and iron.

Bone Marrow Biopsy (Ambulatory Care)

Once you are home, it is important to keep the biopsy area clean and dry. The procedure often causes pain, but this pain is manageable in the correct medically guided way.
