Note that the spread mooring system can still be designed for ship-shaped structures in relatively calm environments with highly directional wind, waves, and current; otherwise, the turret single-point mooring system is normally selected. Kaanerski and S Wagner editors.

Prediction of Fracture and Fatigue Damage in Engineering Structures

Improvements in electrophysiology within the AHM were noted by higher conduction velocities and lower latency in electrical response for electrically stimulated AHMs. Helsinki, Suomen logopedis-foniatriinen yhdistys 2001.
