Chemistry History

Portrait of Antoine and Marie-Anne Lavoisier, who helped develop the metric system and a system for naming chemical compounds. In levels more distant from the nucleus the electrons have increasing energy.

A Brief History of Chemistry

Joseph Priestley 1733-1804 isolated and characterized several gases: oxygen, carbon monoxide, and nitrous oxide.

Laboratory history: The chemistry chronicles

From interesting fiction books to textbooks, find chemistry books on many topics including the Periodic Table, DNA with books written by James D. In the 18th century, the English clergyman Joseph Priestley 1733—1804 discovered oxygen gas and found that many carbon-containing materials burn vigorously in an oxygen atmosphere, a process called The burning of a material in an oxygen atmosphere. Aristotle's definition of a simple body as one into which other bodies can be decomposed and which itself is not capable of being divided is close to the modern definition of element.

Chemistry History

The goal was not to understand the physical world—that came later. Water, for instance, always has a two-to-one ratio of hydrogen to oxygen. However, over the course of the history of chemistry, it took centuries to understand these substances fully.

Laboratory history: The chemistry chronicles

Exercise Four compounds containing only sulfur and fluorine are known. The discovery of various gases and the analysis of air as a mixture of gases occurred during the phlogiston period.
