### Dark Ages timeline

Perhaps dark matter behaves differently than expected. The first weeks of 888 witnessed both the final break-up of the Carolingian Empire and the death of its deposed ruler. Isidore, utilizing his vast reading, compiled encyclopaedias on everything from liturgical ceremonies to the natural sciences.

### Medical History in the Dark Ages

In him was life; and the life was the light of men. It took seven hundred years of wars, plague, and poverty before the continent came out of it and was moved into the Renaissance. The term Dark Ages was first used by Italian scholar and historian, Francesco Petrarca who was also known as Petrarch.

### Great human advances were made throughout the 'Dark Ages'

More recent archaeology suggests that this is broadly correct. The Dark Ages is a period that is generally accepted as having begun in the year 410 with the fall of Rome and ending in 1095 with the launch of the first Crusades. In the beginning God created the heaven and the earth.

### The Dark Ages Of The Ancient Greeks

Yet many of the advancements and refinements of these earlier civilizations were already lost to the world thousands of years before the Arab culture supposedly flowered. Muslim invasions were a serious and continuous issue until the period of the Crusades.

### Dark Ages To Renaissance

Since the archaeological evidence for some periods is abundant and for others scanty, there are also archaeological dark ages. Further south and east, the same was true in the formerly Roman province of , where history after the Roman withdrawal went unrecorded for centuries as , , and others struggled for supremacy in the basin, and events there are still disputed. Baronius' 'dark age' seems to have struck historians, for it was in the 17th century that the term started to spread to various European languages, with his original Latin term saeculum obscurum being reserved for the period he had applied it to.

### **Dark Ages (historiography)**

Such work established the primacy of empiricism over authority and the importance of controlled scientific experiments, making it possible for modern science to arise and come of age later in the Scientific Revolution. It is the assumption that because something did happen, then it had to happen.
