## What Are Real

Real time operating systems mostly use the preemptive priority scheduling. Value state-variables define what goals are important and what objects or regions should be attended to, attacked, defended, assisted, or otherwise acted upon.

## [PDF] Computer Control of Real

This is known as VoIP.

## What is real

In this, we need our computers, cameras or other gadgets should work in real time as utmost precision is required in the industrial automation tasks.

## What is Real

In this our voice is digitalized, compressed into small form and converted into IP packets in real time before transmitting it to the other network on router through IP.

## Control Engineering

For instance, the latency of an oil production process is very different from the latency of an electric power transmission system. Here, middleware support means those components which can be integrated with our RTOS.
