Pain Management for Older Adults: A Self

One of the other challenges with pharmacologic pain management is the understanding that geriatric patients often require different dosages and concentrations of medications, but focused clinical trials are few. Clinical pharmacology of analgesic medicines in older people: impact of frailty and cognitive impairment. However, in 2016, The Joint Commission began a project to both revise its pain assessment and management standards and identified the assessment and management of both acute and chronic pain a priority.
