## Transboundary water management in Central Asia

PACOM also supported equipment and training to establish the blood collection and banking infrastructure in Vientiane, Laos, and plans to expand to a second donor banking facility in Laos. This cooperation with LMI partner countries will advance innovations and international standards in infrastructure development to mitigate environmental and social impacts of major investments.

## Lower Mekong Initiative

These initiatives include building a regional network of women leaders in government and civil society to address critical transnational issues such as environmental resources management; strengthening ties between elected women leaders in Cambodia; funding scholarships for aspiring women engineers; and funding opportunities for female scientists in Lower Mekong countries to collaborate with U.

## Transboundary water management in Central Asia

The situation is exacerbated by severe over-exploitation of the available water resources and the effects of global climate change. Thailand has also indicated it intends to move forward with accession to the Global Alliance. Expanding economic growth and addressing climate change also require coordination and information sharing.

## Transboundary water management in Central Asia

The United States has supported the Mekong River Commission for decades and remains committed to sharing our expertise and working with you to preserve the autonomy of the Mekong region. The program will provide government officials from Cambodia, Laos, Thailand, and Vietnam specialized English-language training in the fields of Environment, Health, and Connectivity. Upstream dam operators need to be more transparent and consultative with downstream neighbors.

## Central Asia

The parties have agreed to cooperate towards the development of a platform for conducting research, training, and policy on regional topics such as water resource management, regional infrastructure systems, and agricultural systems. This August, the United States will invite regulators to a conference co-hosted by Singapore to discuss methods of regional and international collaboration and share best practices. Geological Survey-led multi-year project covers a range of projects and training related to ecological monitoring, data analysis, visualization and mapping tools.
