## Manual of Vascular Access, Organ Donation, and Transplantation

This policy, as written, essentially mandates establishing living donor biorepositories all over the country. If the answer is that it could be things yet discovered and unearthed with as yet untested or unknown assays, then again, what framework provides for consent and protection for all the downstream potential ramifications for living donors? We would like to thank the Ad Hoc Disease Transmission Advisory Committee for your time and dedication to this guidance document.

## Align OPTN Policy with U.S. Public Health Service Guideline, 2020

Thank you for your consideration. In addition to concerns around patient privacy issues, storing these samples may cause programs to incur additional expenses.

### Organ Donor

Public Health Service Guideline, 2020 public comment proposal.

### Organ Donor

One comment said they did support ten year storage for living donor serum.

## Manual of vascular access, organ donation, and transplantation

As Salvatierra et al showed back in 1998, there is a greater than two-fold increase in aortic blood flow after putting an adult kidney into an infant, and this increase was sustained for at least 4 months and appeared to be driven by the blood flow demand of the adult donor kidney. Transplant centers would need to obtain vaccination history from dialysis units which are mandated to vaccinate independent of transplant candidacy.

## **Organ Donor**

The AST would appreciate educational offerings on this topic for programs to provide clarity on best practices for informed consent of donors with these risk factors.
