## Organizational Responsibility

Since SAGE Research Methods focuses on methodology rather than disciplines, it can be used across the social sciences, health sciences, and more. This emphasis becomes evident in optimization of production systems in which we are sequencing orders, scheduling batches, determining the number of materials handling units, arranging factory layouts, finding sequences of motions, etc. Editors Dingwall and McDonnell are prominent researchers based, respectively, in the UK and US, who bring to the project collective expertise in higher education, administration, consulting, journalism, non-profit advocacy, and longitudinal research.

The approach of Industrial and systems engineering ISE is opposite; any one part cannot be understood without the context of the whole system. To evince an explanation for discrepancies it has also been examined whether all three leadership styles justified mediating effects. Dingwall and McDonnell manage to combine a realism, 'there is no one toolkit', with some useful guidance on the frameworks and framing which is required as a research community if we are to improve our chances of meeting our goals of advancing knowledge in the 21st Century.
