Neovenator salerii

The new species has several skull table and iliac morphological characteristics that distinguish it from A. La parte inferior frontal del fémur es casi plana y solo muestra una ranura vertical corta entre los cóndilos inferiores.

Complex neuroanatomy in the rostrum of the Isle of Wight theropod Neovenator salerii

These were catalogued as IWCMS 2002. Thecocoelurus daviesi 'Sheath hollow form' is based on the discovery of a vertebra found by Reverend Fox. These became part of the MIWG collection and were catalogued MIWG.

h2g2

On the thighbone the lesser trochanter has a robust ridge on its outer side. Monograph of the Palaeontographical Society 162 631 : 166.

Neovenator/Neovenator

Elevated paired nasal crests are shared with Allosaurus.

h2g2

In the case of Neovenator the history has involved a large number of people, not just as a result of the extended period over which the bones were found but as a result of the subsequent detailed scientific follow-up that still continues as new ideas about its lifestyle and evolutionary links are explored. Multibody dynamics model of head and neck function in Allosaurus Dinosauria, Theropoda , Palaeontol. Having pneumatised rear back

vertebrae is normal for carcharodontosaurids.
