Organotransition Metal Chemistry: From Bonding to Catalysis, by John Hartwig with Contributions by Patrick J. Walsh, Geoffrey W. Coates, Charles P. Casey, Jack R. Norton, copyright 2010, published by University Science Books

. Therefore we believe that a shorter treatment would be welcome. .

Principles of Organometallic Chemistry

C—H bond oxidation using visible light leads mainly to the formation of C—O and C—N bonds, whereas cross-coupled C—C bonds can be formed through the radical additions on hetero arenes using photoredox assisted mechanism. Most other group II organic compounds are generated by , which limits their accessibility. Chemical Reviews 2013, 113 10 , 7470-7562.

The remainder of the book focuses on the reactions of organometallic complexes. Labinger, California Institute of Technology Organotransition Metal Chemistry—From Bonding to Catalysis provides a selective, but thorough and authoritative coverage of the fundamentals of organometallic chemistry, the elementary reactions of these complexes, and many catalytic processes occurring through organometallic intermediates.
