

Stratigraphy and sedimentology of the lower Cretaceous Gething formation, Carbon Creek coal basin, northeastern British Columbia

Geological Survey of Canada - Stratigraphy, Geochemistry, and Paleoceanography of Organic Carbon

Description: -

- Home and school.

Sex instruction -- United States.

Central-local government relations -- Great Britain.

Housing policy -- Great Britain.

High technology -- Economic aspects -- Abstracts.

Remedies (Law)

Criminal procedure.

Gething Formation (B.C. and Alta.)

Geology -- British Columbia -- Maps.

Geology -- British Columbia.

Coal -- Geology -- British Columbia.

Geology, Stratigraphic -- Cretaceous. Stratigraphy and sedimentology of the lower Cretaceous Gething formation, Carbon Creek coal basin, northeastern British Columbia

- t. 34, fasc. 2

Acta Universitatis Szegediensis de Attila József Nominatae.
80-12.

Paper (Geological Survey of Canada) ;
80-12

Paper / Geological Survey of Canada ; Stratigraphy and sedimentology of the lower Cretaceous Gething formation, Carbon Creek coal basin, northeastern British Columbia

Notes: Bibliography: p. 9-10.

This edition was published in 1985

Past Earth Sciences Theses

A subtle but consistent west to east

increase of rank in these coals, from Cypress Hills to Estevan, Saskatchewan is probably attributable to geothermal patterns similar to extant patterns Cameron, 1991.

Download Sedimentology And Stratigraphy

If the samples analyzed for this study are representative of other thick laterally extensive seams, such as the Fourth coal interval, large reserves of coalbed methane are most likely present in the Western Canada Sedimentary Basin. Geological Survey of Canada, 2001: U.

Chapter 33

The majority are horizontal with calcite cementation Figure 2. Author: Sam Boggs Publisher: Macmillan College ISBN: Category: Estratigrafia Page: 774 View: 848 Aimed at advanced undergraduates but suitable also for graduate students and professionals, it covers processes of sedimentation, describes the characteristics of sedimentary rocks formed in major sedimentary environments, and discusses the fundamental principles of stratigraphy and basin analysis, including recent developments in the important fields of magnetostratigraphy, seismic stratigraphy, sequence stratigraphy, isotope stratigraphy, and sea-level analysis.

Chapter 20

These coals, however, are commonly of subbituminous C rank, although some of the more deeply buried coals have achieved bituminous rank. Geological Survey Professional Paper 302-B, p.
