Milroy Lecture 1914

The attempt to perform too much with restricted means is almost invariably attended with unsuccessful results. Poverty in the case of miners can be practically passed over as a determining agent, as it is much more likely to be secondary to other causes. When this happens, one of the advantages of the shrinkage method is lost, with the result that the conditions prevailing resemble those accompanying ordinary overhand stoping and must be met in the same way.

Occupational Exposure to Heavy Metals Poisoning: Scottish Lead Mining

Little or no care, with some exceptions, was bestowed on them by their employers.

Drilling equipments

Small groups of lessees worked at the Venus, near Nelson; the Emerald, at Salmo; and the Keystone, near Erie; but these properties were not visited. The mining companies relied on a much cheaper option to address airborne dust, the compensation system for occupational lung diseases.

Drilling equipments

The effects of chronic stress on health: new insights into the molecular mechanisms of brain-body communication. During 1935 the importation of coal from the United States into British Columbia consisted of 32 tons of anthracite, 2,556 tons of bituminous coal, and 4,649 tons of lignite. The only bulb approved for use with this lamp carries the symbol BM-18H and is manufactured by the National Lamp Works of the General Electric Company, Cleveland, Ohio.

Metalliferous Mine Dust: Human Health Impacts and the Potential Determinants of Disease in Mining Communities

Gould stated that there was no desire to reduce the standard of living below the level of subsistence for the ordinary workers, but when they are living below the poverty line it is not expected that they can be physically fit to perform the task which they have to perform

The Ecological Impact Of Coal Mining Environmental Sciences Essay

Gill added that they were prepared to show their books to anyone who wished to see them. Fatal accidents sometimes result from miners walking into an accumulation of pure fire-damp. There are machines for this purpose which are efficient, and yet so long as the colliery company puts in one kind of machine that seems to meet the requirements of the law.
