Multidimensional poverty and its determinants: Empirical evidence from Nigeria

Malaria is one of the most important challenges to public health with about 300 to 500 million cases reported annually. In Malawi, for instance, households with very low income carried a disproportionate share of the economic burden of malaria, with total direct and indirect cost of malaria consuming 32% of annual household income, compared with 4. Lagos, Nigeria Federal Office of Statistics; 1992.

Poverty and fever vulnerability in Nigeria: a multilevel analysis

The sample was then divided into quintiles from one lowest to five highest. Analysis of 2016 state government budgets. Each household was then assigned a score for each asset, and the scores were summed for each household.

The Determinants of Regional Poverty in Nigeria Project Topics : Current School News

Conclusion While, overall bednet possession was low, less fever was reported in households that possessed bednets. Discussion This study showed that under-5 mortality was significantly associated with region of residence, with higher risks of under-5 deaths for children of mothers resident in the South South region after adjusting only for individual-level risk factors and only community-level risk factors, as well as simultaneously adjusting for individual- and community-level risk factors.

Multidimensional poverty and its determinants: Empirical evidence from Nigeria

In using this approach, the correlation between children from the same cluster or region arises from their sharing specific but unobserved properties of the respective regions.

The Determinants of Regional Poverty in Nigeria Project Topics : Current School News

There are no significant variations in multidimensional poverty between sub-regions in the south. Lack of resources prevents people from seeking timely health care.

Regional inequalities in under

One such environment is the regional environment.

The Determinants of Regional Poverty in Nigeria

Region of residence was included as the only explanatory variable in Model 1 to assess the independent influence of region of residence on the risks of under-5 deaths, and was significantly associated with the risks of under-5 deaths, with about twofold higher risks for children of mothers resident in the North East HR: 2. DO NOT copy word for word.

The Determinants of Regional Poverty in Nigeria Project Topics : Current School News

The assessment of community-level characteristics across regions of residence in the study sample indicated that children in the Northern regions constituted most of the study sample. OY and BA prepared the initial draft.
