## Glossary of Vascular Terminology

Claudication - Occurs because a blocked artery is interfering with the amount of oxygen-rich blood that can reach the muscles in one or both of the arms or legs, resulting in cramps or fatigue with exercise. Ischemia - An organ heart, brain, kidneys, or foot, for example that is not getting adequate blood flow and lacks vital oxygen and nutrients, preventing normal function. Subclavian artery - Artery that branches off of the aorta in the chest and supplies blood to the arm.

## Wuweido 3D CAD download

Endograft - A graft placed inside the blood vessel to treat aneurysms. This leads to heaviness of the leg, swelling and occasionally ulceration.

## Wuweido 3D CAD download

Leg bypass - A vein or plastic tube is sewn in place to redirect the blood flow around a diseased portion of a blood vessel in the leg. It is opened to form a rigid support to hold the clogged artery open to potentially prevent recurrent narrowing.

## Glossary of Vascular Terminology

Draft creation tools: Line, Poly Line, Arc, Spline, Circle, Ellipse, Rectangle, Regular Polygon. This test is used to locate blocked arteries or measure their size. Edema - Swelling or fluid collection in the tissues.
