Curriculum Questions for Intent, Implementation and Impact

3. Impact

What methods do you use to ensure evaluations are robust? How does this inform future planning/research?

How would we reliably measure the impact of our curriculum proposal?

How would you evaluate impact, in terms of success criteria in a year and in three years?

If you are reflecting on your curriculum, how is added to teacher workload?

Always remember results, how do you demonstrate impact?

What other values could we evaluate? Is it only the academic, or is it just along diversity, well-being, etc?

What do your students say about their personal, social and health curriculum?

Does your school track pupil achievement and progress, which then informs your curriculum intention going forward? If yes, provide an example. If no, discuss how we can use the results of your students' learning and go to work on and/or improve your curriculum approach to support the 2018 review/refreshing?

How would you address a curriculum that does not fully meet the needs of all pupils?

Where is the curriculum validated and when is it last done so?

Let's view with the stated question: How do you know you have a quality curriculum beyond outcomes?

Note:
