Towards prolongation of the healthy life span : practical approaches to intervention

In fact, those subjects diagnosed with atherosclerosis were shown to have homocysteine levels averaging 26 percent higher than those of healthy subjects. One possible explanation is that since the metabolism of some people diagnosed with hyperhomocysteinemia is so severely altered that, not only can they tolerate such high doses of B6, they may actually require them.

Towards Prolongation of the Healthy Life Span: P... by Meydani, Mohsen Paperback

Vitamin B12 status and homocysteine metabolism in type 2 diabetes mellitus on biguanide therapy.

This topic is discussed in order to find possible practical measures to decrease superoxide radical f This volume discusses the latest significant research on biological changes with age and the application of this knowledge to the problem of increasing the healthy life span. Xu and colleagues found that homocysteine in cell cultures greatly increased the rate of telomere shortening Fig.

Homocysteine Risks Include Stroke, Heart Disease and Other Health Concerns By Ward Dean, MD Homocysteine is an amino acid that forms naturally in the body as a byproduct of the metabolism of methionine, an amino acid found in red meat.

Homocysteine Risks Include Stroke, Heart Disease and Other Health Concerns

Impairment of endothelial functions by acute hyperhomocysteinemia and reversal by antioxidant vitamins. Evidence that homocysteine is an independent risk factor for atherosclerosis in hyperlipidemic patients. Towards Prolongation of the Healthy Life Span: Practical Approaches to Intervention by Denham Harman

The conversion of homocysteine back to methionine is called remethylation. Hyperhomocysteinemia: a common and easily reversible risk factor for occlusive atherosclerosis. Very Good: A book that does not look new and has been read but is in excellent condition.

High prevalence of cobalamin deficiency in elderly outpatients. Dong Xu and colleagues examined the effects of homocysteine on the length of telomeres of endothelial cells. In such cases betaine trimethylglycine, or TMG has been shown to be quite effective in reducing high homocysteine levels by enhancing the remethylation of homocysteine by a different pathway than vitamin B6.
