[PDF] **Adolescence; Its Psychology and Its Relations to Physiology, Anthropology, Sociology, Sex, Crime, Religion and Education**

Changes in the senses and the voice ; Evolution and the feelings and instincts characteristic of normal adolescence ; Adolescent love ; Adolescent feelings toward nature and a new education in science ; Savage public initiations, classical ideals and customs, and church confirmation ; The adolescent psychology of conversion ; Social instincts and institutions ; Intellectual development and education ; Adolescent girls and their education ; Ethnic psychology and pedagogy, or adolescent races and their treatment. The superiority of girls over boys in both height and weight lasts five years, or from the twelfth to the seventeenth year, which is much longer than other observers have found.

Adolescence its psychology and its relations to physiology, anthropology, sociology, sex, crime, religion and education, (eBook, 1905) [vivchar.tom.ru]

If she abandons her natural naïveté and takes up the burden of guiding and accounting for her life by consciousness, she is likely to lose more than she gains, according to the old saw that she who deliberates is lost. Hall was elected a member of the in 1888. Women can remain in what is really a suppressed semi-erotic state with never-culminating feeling, so scattered in their interests and enthusiasms that they can not fix their affections permanently.

G. Stanley Hall

Modern ideas and training are now doing this, whether for racial weal or woe can not yet be determined, for many whom nature designed for model mothers. Is a period of rapid growth advantageous or would it be better if the curve of height and weight were a straight line, as, previous to the measurements above described, it had been generally supposed to be? New York: Teachers College Press, Columbia University. The more the father has himself sinned and suffered, the more severe and the less compassionate a counselor will he be.

Adolescence: Its Psychology and its Relations to Physiology, Anthropology, Sociology, Sex, Crime, Religion, and Education. By G. Stanley Hall, Ph.D., LL.D, American Anthropologist

Of the laws and processes of growth in individual tissues and organs, our knowledge is but limited, and of those in chemical complexity, we know still less, and yet it is not improbable that these more specific and higher changes are more closely related to psychic development than is growth in height and weight.

Adolescence: Its Psychology and its Relations to Physiology, Anthropology, Sociology, Sex, Crime, Religion, and Education. By G. Stanley Hall, Ph.D., LL.D, American Anthropologist

Before 23 she found the number of non-college women married in proportion to married graduates as 30 to 8 per cent; from 23 to 32 as 64 to 83 per cent; and over 33 as 5 to 7 per cent.

Adolescence : its psychology and its relations to physiology, anthropology, sociology, sex, crime, religion and education : Hall, G. Stanley (Granville Stanley), 1844

He found irregularity in about 50 per cent and far more are retarded.

Hall, G.S., Adolescence: Its psychology and its relation to physiology, anthropology, sociology, sex, crime, religion and education. New York, NY: Appleton, 1904.

Age determinations are often too inaccurate, and frequency of measurements vary. The relative sterility of the one-child system occurs in England once in about thirteen fruitful marriages, and those without offspring sixteen months after marriage are beginning to be sterile, as also are those who do not at their best period bear a child every twenty months. Stanley Hall and his colleagues and students, emerged in a social context of worries over degeneracy and progress.

Adolescence its psychology and its relations to physiology, anthropology, sociology sex, crime, religion and education, Vol. II (Computer file, 1904) [vivchar.tom.ru]

It is urged, too, that in singing classes the voices of each sex are better in quality for the presence of the other. Studies of fatigue and all we know of metabolism indicate that the second factor is far more variable, especially within short periods, than mass, as well as far more closely associated with function.
