Gambling on the Future: Saemangeum

For night surveys we could only roughly assess whether birds observed roosting in the afternoon were using the same roosts at high tide later that same evening.

A large mid

The Grey Plovers typically showed a heads-up posture, which may detect predators or other disturbances more quickly when roosting compared with Spotted Greenshanks.

Assessment of seismic vulnerability using the horizontal

One of the key priorities for the implementation of Resolution 26 in 2020 is to ensure that the WH nomination processes are undertaking the relevant steps in each country. In our case, water depth was controlled by salt farm management and to a lesser extent by evaporation rate as there is typically little rainfall during winter. Situation in South Asia THE positive attitude of the Asean countries is shared by the countries of South Asia.

Birds Korea

Sihwa Lake is a manmade reservoir that was built by constructing a dike across Sihwa Bay. Upo Wetland, a Ramsar Wetland of International Importance, and Junam Reservoir, a very important wetland in the City of Changwon, the venue of the Ramsar COP10 in 2008, are representative wetlands formed in floodplains of the Nakdong River. Since then, a net gain of about 7% has been estimated.

Background Roost-site quality can significantly affect the individual fitness of shorebirds, but roost sites remain poorly described for many threatened species on the East Asian—Australasian Flyway. The views expressed in this report do not necessarily reflect the official policy or position of the Nautilus Institute. Diurnal and nocturnal roost site fidelity of Dunlin *Calidris alpina pacifica* at Humboldt Bay, California.

Roost selection of the endangered Spotted Greenshank (*Tringa guttifer*) in critical habitat in the Inner Gulf of Thailand

We also delineated the ancestral range of the species, defined as the potential range of the species before human development. Knowledge of which species are most affected by land use changes around Sihwa Lake will enable the development of specific mitigation policies to stabilize bird populations by ensuring adequate habitat varieties to support the wide range of species that utilize this area. Surveys were performed on clear days, avoiding cloudy, rainy, or snowy days to preclude errors due to weather conditions.
