Environment and International Politics: Linking Humanity and Nature

Minimum relevance: participating countries account for only about 12% of global emissions. Although biomass is abundant and low cost, unless we learn how to cost-effectively convert biomass to these industrial products, their potential benefits will be largely unrealized. New research by a group of environmental law scholars explores the untapped capacity of existing environmental and natural resources management statutes to address accelerating environmental change in the absence of major legislative reform.

Intergenerational equity

And the international political economy, with its global division of labor and wealth, can promote environmental abuses, particularly in the Third World.
