Associations, federations and learned societies

Science curricula should be adapted to take into account the impact of these new technologies on scientific work. They should also provide opportunities for lifelong learning in the sciences.

Chemistry Consortium in the National Research Data Infrastructure

Their joint effort should be focused on strengthening national research systems, taking into account national priorities and science policies. Some societies, particularly in medicine and life sciences, have an important role in professional accreditation. Special interdisciplinary research programmes are needed to analyse and monitor the ethical implications and means of regulation of scientific work.

Research Distinctions

Communication skills and exposure to social sciences should also be a part of the education of scientists.

Associations, federations and learned societies

Relevant sub-disciplines, topics and fields of action were identified and discussed.
