## 10 Incredible Kentucky Photos from the 1800s and Early 1900s

This source of funds acts as seed money for research, support for students, and a motivating factor for each of the academic units to support the participation of their faculty in the program.

**Khalifah Al**

In the 1980s and 1990s, an impressive array of scholarly studies have laid the groundwork for transforming the way we understand and Copyrighted Material STEPHEN L.

## Blackberry Creek Retreat Bed & Breakfast

This poster summarizes the methods used and provides the results of the regional analysis.

**Khalifah Al**

Flooding resulting from tropical storm Irene on August 28—29, 2011, caused widespread destruction in the region, including extensive and costly damages to the State-owned hatchery and the transportation infrastructure in the Town of Roxbury, Vermont.

## Blackberry Creek Retreat Bed & Breakfast

Dorothy: Yes, it's a very broadening experience. It contains data from January 1, 2007, through September 30, 2013. Selected residual plots for

the PRESS-minimized equations are presented to demonstrate that systematic bias in regional regression equations for peak-streamflow frequency estimation in Texas can be reduced.

Investigation showed that the lat- ter condition was caused by the appearance of great schools of bonito, which came up the coast over the usual mackerel route and kept the schools of mackerel well offshore, and later, when the mackerel approached their regular course, caused them not to show, but to move along under water. Here we use a distributed land surface model to quantify the potential impact of this change in the climate on the hydrological regime of the river. On the basis of land-cover data for 2003, most of the land in the flood plains was cropland and residential land.

### **Hatfield**

Dorothy was CFA's board chairperson in 1991. Geological Survey USGS , in cooperation with DuPage County Stormwater Management Division, maintains a USGS database of hourly meteorologic and hydrologic data for use in a near real-time streamflow simulation system, which assists in the management and operation of reservoirs and other flood-control structures in the Salt Creek watershed in DuPage County, Illinois. Institutional bodies were typically not directly interested in describing climate or hydrological events but they were obliged to document their activities, especially if they generated financial costs bookkeeping , and in doing so they often indirectly recorded climatologic or hydrological events.
