### 10 Facts About Brachiosaurus, the Giraffe

Another special characteristic of this figure is the care in the details and postures, which gives the impression that the figurines are animated. Janensch concluded that the four genera must have been closely related to each other, and in 1929 assigned them to a Brachiosaurinae within the family Bothrosauropodidae. During the twentieth century, several sauropods were assigned to Brachiosauridae, including Astrodon, , Pelorosaurus, , and Ultrasauros.

### Brachiosaurus: Facts About the Giraffe

Their great neckbones, for example, are so deeply excavated that they function as a lightweight framework of struts and plates.

### 10 Facts About Brachiosaurus, the Giraffe

In contrast to earlier studies, Taylor treated both genera as in a cladistic analysis, finding them to be. In 1883, farmer Marshall Parker Felch, a for the American paleontologist , reported the discovery of a sauropod skull in Felch Quarry 1, near.

### Brachiosaurus Facts for Kids

In 1914, German paleontologist listed differences and commonalities between these fossils and B. Life of the Past series ed. The air sacs were via tubes connected with the vertebrae.

### Brachiosaur (Final Fantasy VI)

Like most other dinosaurs, brachiosaurus did not chew their food but used their jaws to collect food, which the tongue presumably forced into the throat. Decades later, though, this theory was discredited when a detailed mechanical analysis demonstrated that the high water pressure of an undersea habitat would quickly have suffocated this giant beast. He suggested that the expanded nasal opening would have made room for tissue related to the animal's ability to smell, which would have helped smell proper vegetation.

### Brachiosaur (Final Fantasy VI)

Even if it did not hold its neck near vertical, and instead had a less inclined neck, its head height may still have been over 9 meters 30 ft above the ground. A bipedal stance might have been adopted by *Brachiosaurus* in exceptional situations, like male dominance fights. *Brachiosaurus*, with its shorter arms and lower shoulders, was not as well-adapted to high-browsing as *Giraffatitan*.
