If only one specimen per taxon is cited and that specimen is later determined to be misidentified, it is not possible to exclude the name because there is always the possibility other, correctly identified specimens could exist. As a consequence of this attempt to make use of segregates, it was realized that the ecologist could work only with more objective units, checked by statistics and experiment, and based to the fullest degree upon evolutionary relationship. Section P haestoglochin D umort.

The use of invertebrates as indicators of environmental change in alpine rivers and lakes

South of Sandspit grass covered dunes are grazed by c a t t l e. The mass ratio theory predicts that the properties of an ecosystem will be determined by the components that make up the largest proportion of the biomass, or that ecosystem functioning will be determined by the traits of the dominant plants Grime 1998.

Carex Working Group

In most cases the synonymy was straightforward and unambiguous e. CAN-287133 ; flats on W side of Fockler Creek, above spruce forest in creek valley, ca.

A Synopsis of Chromosome Number Variation in the Cyperaceae

It is not recorded from the Canadian Arctic Archipelago.

Carex rosea

This taxon and *Eriophorum triste* have been recognised as separate species ; , subspecies of *Eriophorum angustifolium* or a single polymorphic taxon.

CAREX sect. PHAESTOGLOCHIN in Flora of North America @ vivchar.tom.ru

Bulletin of The New York Botanical Garden. These environments were chosen because both are relevant to future environmental change. .
