Wayne Wu, Explaining Schizophrenia: Auditory Verbal Hallucination and Self-Monitoring

American Journal of Psychiatry, 143, 1088—1097. Personality and Individual Differences, 20 6 , 753—760.

Cognitive Factors Mediating the Relationship Between Childhood Trauma and Auditory Hallucinations in Schizophrenia

Researchers have employed many different, closely related, techniques to investigate source or reality monitoring. This would contribute to the failure to contain and control effectively the onset and frequency of these auditory signals.

Auditory Hallucinations, Source Monitoring, and the Belief That “Voices” Are Real, Schizophrenia Bulletin

Difference in SM variables between cases and controls, as well as between cases with current or past AVHs were assessed using Student t-test.

Misattribution Models (II): Source Monitoring in Hallucinating Schizophrenia Subjects

The implications of these results for research and practice are also discussed.

Musical ear syndrome definition, causes & treatment

The personalized content and subjective reality of voices play a role in the development of strong beliefs about the intent and power of voices, and a complicated and intense relationship frequently ensues between patients and their voices.

Cognitive factors in source monitoring and auditory hallucinations

Are auditory-verbal hallucinations associated with auditory affective processing deficits? Acta Psychiatrica Scandinavica, 112, 330—350.

Wayne Wu, Explaining Schizophrenia: Auditory Verbal Hallucination and Self-Monitoring

Social Science and Medicine, 63, 1900—1911.

Auditory Hallucinations, Source Monitoring, and the Belief That “Voices” Are Real, Schizophrenia Bulletin

In addition to AH symptoms, the assessment and reporting of other symptoms are important. Cognitive processes in auditory hallucinations: attributional biases and metacognition. Psychological treatments in schizophrenia: I.
